

TRANSCO PRICING CONSULTATION PAPER PC47

Dataloggers

SUMMARY

Daily Metered (DM) supply points, as defined by the Network Code, presently pay standard datalogger charges of £436 per annum per datalogger and £8.46 per supply point for the annual check read. This does not fully reflect the expected ongoing annual running costs associated with dataloggers at DM supply points. This paper presents the costs to Transco of providing and servicing DM dataloggers and invites views on whether, with effect from 1 October 1999, the annual charge for DM supply points should be increased to a fully cost reflective charge of £559.07. A charge for the annual check read has been incorporated into this revised datalogger charge and hence it is also proposed to abolish the present check read charge.
