

# Changes to Non Storage Supply Assumptions

## Non Storage Supply Assumptions

---

- Initially set out in Winter Outlook
- “View” based on typical levels of flow expected for demand > 400mcm
- Reviewed regularly during winter
- No days above 400mcm, however supplies are different from predicted
- Change to be implemented from Monday 11th Feb

## Changes

	Winter Outlook	From 11 Feb	Comment
UKCS	124	100	Steady flows; below forecast due to developments not coming online and upstream issues
Norway	105	105	Supplies have averaged higher, however recent Troll issue requires caution.
LNG	80	50	Reduction in flows and shipping to UK. However flows have responded to short term issues/demand increases.
Interconnectors	50	80	Imports through IUK and BBL have been consistent all winter.
Total	359	335	An overall reduction; worth noting that storage flows have consistently been above expectations
