

EU Harmonisation of Maintenance Publications at Interconnections Points 2019

European Regulation EC 715/2009 puts an obligation on Transmission System Operators (TSOs) to publish Maintenance Information.

Information in this published document covers the impact of NTS maintenance on interconnector capacity, based on the most up to date maintenance information available. We work closely with our customers to ensure minimum impact to supply and endeavour to meet our firm entry and exit obligations.

Please note that the figures published are on our best view of the maintenance schedule to date. The impact on firm obligations through revisions to any scheduled maintenance are reviewed monthly and published 42 days in advance of the maintenance activity occurring.

Further information on our overall maintenance plan is available on the National Grid website at www.nationalgridgas.com/data-and-operations/maintenance and will be published by 1st April for the following year. This document only includes the impact of maintenance activities on the NTS, which are to be undertaken by National Grid NTS. It does not include maintenance carried out upstream of the NTS by Delivery Facility Operators (DFO's) / Producers or downstream of the NTS by the Distribution Networks.

If you have any queries or questions regarding the information contained within this document, please contact NTS Access Planning, Gas Operations, National Grid House, Gallows Hill, Warwick, CV34 6DA. We would welcome any feedback from you in relation to the information provided, if you would like to provide feedback please contact us via email on NTSaccessplanning@nationalgrid.com.
