

Shaping the Gas Transmission network of the future - Have your say

Introduction

Bridget Hartley

**Gas Transmission RIIO T2 and Investment
Assurance Manager**

National Grid Gas Transmission – the network

Our role

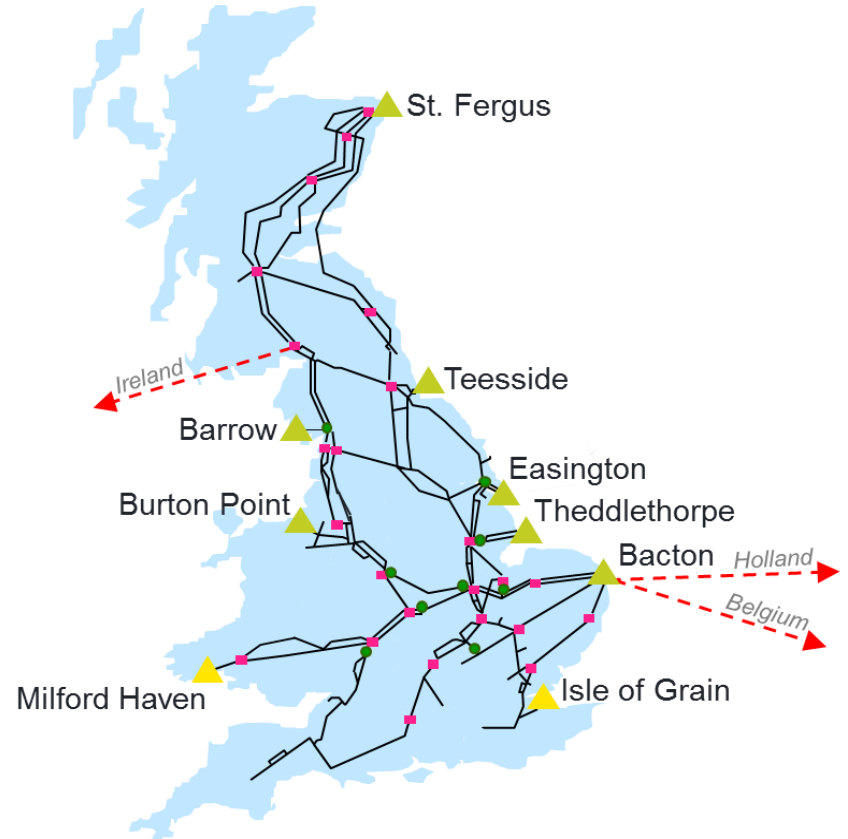

To connect millions of people to the energy they use safely, reliably and efficiently

We own & operate

7,660km of high pressure pipelines, 24 compressor stations and over 600 above ground installations

We transport

Over 3 times the energy provided by electricity (over 995TWhrs) each year

We live in uncertain times

Future of Gas

To **listen** to you and incorporate your views in our plans, to ensure we continue to provide the efficient services you require

Why we're here today

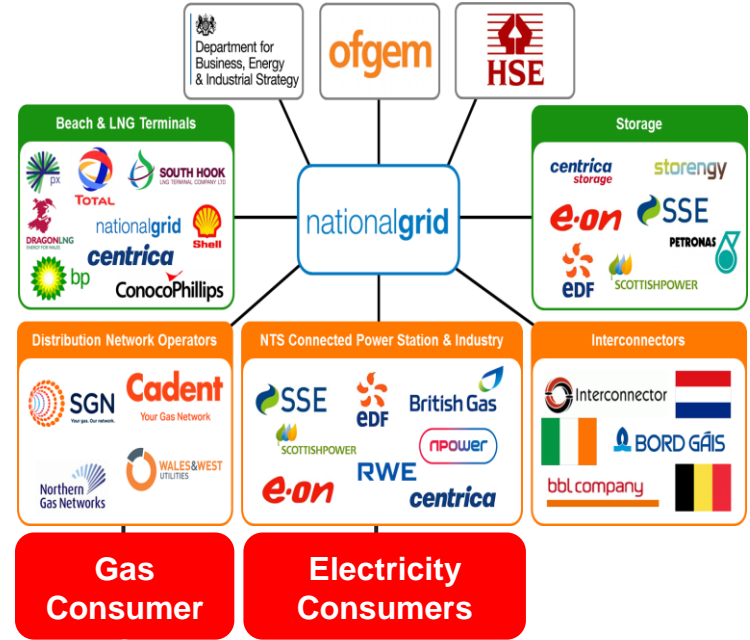

We know

Our customers and stakeholders rely on the service we provide

We haven't always spent enough time listening to your priorities

We're changing

To ensure your requirements are at the centre of our business plans

We are all customers of the NTS

You, me, our friends & family

- As Gas Transmission we are largely invisible to the gas consumer
- Yet there are 22 million domestic gas consumers and even more consumers reliant on electricity produced from gas
- Our charges currently make up £9/year of the average dual fuel energy bill

We would like your views on how we all ensure we successfully deliver for the end consumer

Please join the debate

We are at a time of significant change in the energy industry, and the vital role that gas plays will need to **evolve**

Today's workshop is focused on areas which you've already told us are important and which will directly **influence** our business plans

We are committed to **listening** to you, our customers and stakeholders, to develop the Gas Transmission Network you require for today and tomorrow

Take part
Have fun
Be honest and direct
