Future of Gas – Key messages

Gas is critical to security of supply now and in the transition to a low carbon future

Heat needs to be decarbonised by 2050 – using existing assets is likely to bring good value for consumers

Energy system operability will become increasingly challenging – we need to prepare for a dynamic future

While the pathways remain uncertain, this is not the time to shut down any network optionality

Innovation will enable the future

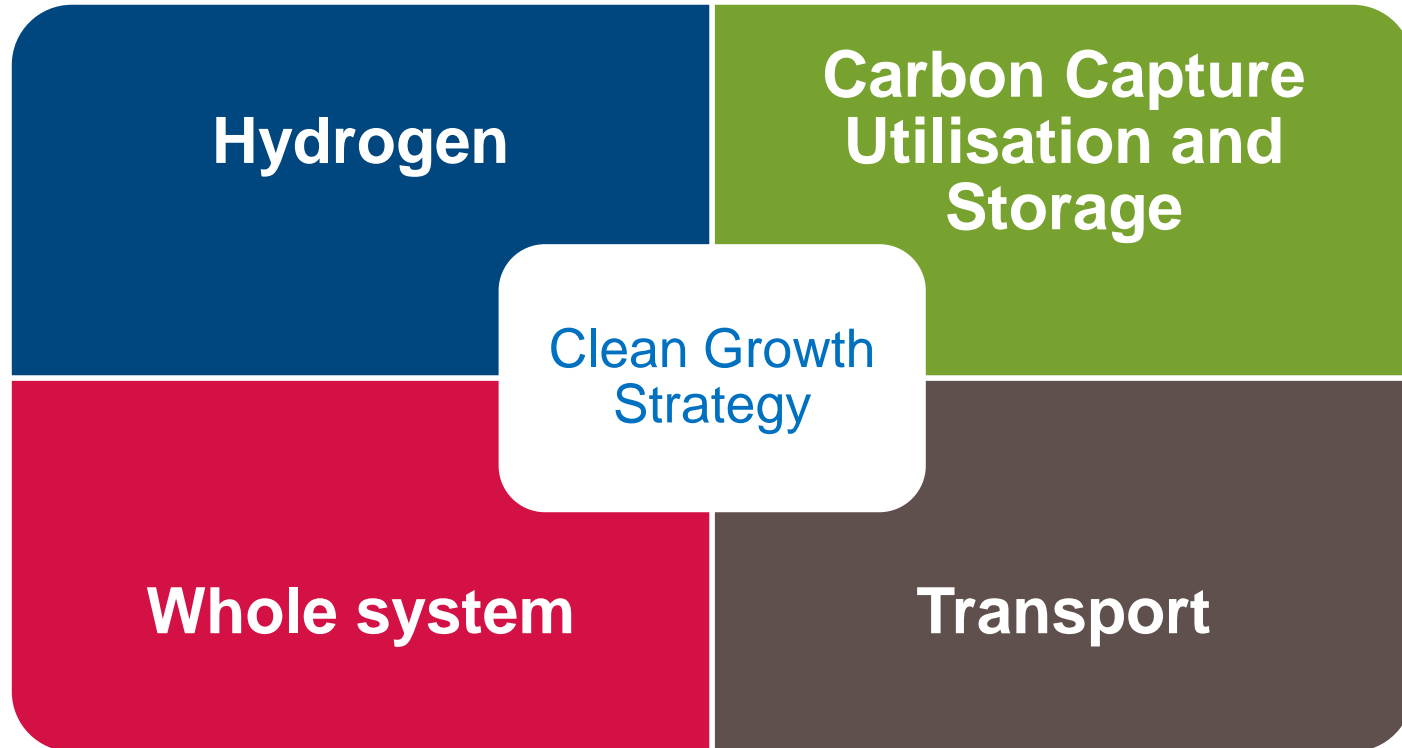

Government Clean Growth Strategy

“To achieve the clean growth we want, the UK will need to nurture low carbon technologies, processes and system that are as cheap as possible”

HM Government CGS October 2017

**INVESTMENT IN INNOVATION FOR CLEAN
GROWTH**

Innovation in gas sector can deliver clean growth whilst also delivering value
